

Table of Contents

1. Cover
2. Half Title
3. Series Page
4. Title Page
5. Copyright Page
6. Dedication
7. Contents
8. Foreword to the First Edition
9. Foreword to the Second Edition
10. Preface
11. Acknowledgments
12. Editors
13. Contributors
14. Acronyms and Abbreviations
15. Section I: Vegetation Biophysical and Biochemical Properties
16. Chapter 1: Recent Developments in Remote Estimation of Crop Biophysical and Biochemical Properties at Various Scales
17. Chapter 2: Hyperspectral Assessment of Ecophysiological Functioning for Diagnostics of Crops and Vegetation
18. Chapter 3: Spectral and Spatial Methods for Hyperspectral and Thermal Image-Analysis to Estimate Biophysical and Biochemical Properties of Agricultural Crops
19. Chapter 4: Spectral and 3D Nonspectral Approaches to Crop Trait Estimation Using Ground and UAV Sensing
20. Chapter 5: Photosynthetic Efficiency and Vegetation Stress
21. Section II: Plant Species Identification and Discrimination
22. Chapter 6: Crop Type Discrimination Using Hyperspectral Data: Advances and Perspectives
23. Chapter 7: Identification of Canopy Species in Tropical Forests Using Hyperspectral Data
24. Chapter 8: Characteristics of Tropical Tree Species in Hyperspectral and Multispectral Data
25. Chapter 9: Detecting and Mapping Invasive Plant Species Using Hyperspectral Data
26. Chapter 10: Visible, Near Infrared, and Thermal Spectral Radiance On-Board UAVs for High-Throughput Phenotyping of Plant Breeding Trials
27. Section III: Conclusions
28. Chapter 11: Fifty Years of Advances in Hyperspectral Remote Sensing of Agriculture and Vegetation—Summary, Insights, and Highlights of Volume III: Biophysical and Biochemical Characterization and Plant Species Studies
29. Index
