

TRAFFIC-RELATED AIR POLLUTION AND EXPOSURE IN URBANIZED AREAS

Bernard Polednik, Sławomira Dumala, Łukasz Guz
and Adam Piotrowicz

Table of Contents

Preface
About the authors

1- Pollutant characteristics and emissions

2- Overview of road transport equipment in Europe

2.1 Current condition of vehicles and infrastructure --
2.2 European Emission Standard (EES)

3- Detailed situation of road transport in Poland

3.1 Data source --
3.2 Total number of vehicles --
3.3 Age structure of vehicles --
3.4 Division of vehicles by type of fuel --
3.5 Assessment of long-term changes in road indicators to the average level of pollution --
3.6 Air quality in 2019 taking into account the type of measuring station --
 3.6.1 PM₁₀ --
 3.6.2 PM_{2.5} --
 3.6.3 SO₂ --
 3.6.4 NO_x --
 3.6.5 CO --
3.7 Summary

4 Traffic-related pollution in Lublin

4.1 Traffic-related pollution issues --
4.2 Location of the study --
4.3 Characterization of traffic-related pollution in Lublin --
4.4 Novel studies on traffic-related environmental pollution in Lublin --
4.5 Monitoring of traffic-related pollution performed by Voivodship Environmental Protection Inspectorate --
4.6 Investigation of elemental composition of traffic-related aerosol pollutants --
4.7 Studies on the concentrations of aerosol particles in different locations of the city --
4.8 Investigations of the concentration of aerosol particles and exposure along a busy street --
 4.8.1 The results of spring measurements --
 4.8.2 The summer measurement results --
 4.8.3 The results of measurements conducted over four seasons --
4.9 Measurements of non-traffic-related aerosol particle concentrations --
 4.9.1 Exposure to traffic-related and non-traffic-related PM --
4.10 Measurements of traffic-related pollution in other cities and regions of Poland --
4.11 Methods and prospects for reducing the concentration of traffic-related pollution --
4.12 Conclusions.

5 Health effects
